Aim: To design and develop a Student Hub portal for managing student-related academic activities and information. To identify the problem scope, user roles, key modules, navigation flow, and required web pages of the portal. To create a sitemap and low-fidelity wireframe showing the structure and navigation of the system. To organize the project using a proper folder structure and README file. To initialize and manage the project using a GitHub repository.

Tools/Technology to be Used:-

VS Code, Draw.io/Figma, Git, GitHub

Theory Logic: Core concept of Practical :- A sitemap defines the structure of the Student Hub portal and shows how different pages are connected.

A low-fidelity wireframe represents the basic layout and navigation of each page before actual development.

A proper folder structure, README file, and GitHub repository help organize, document, and manage the project efficiently.

Code:

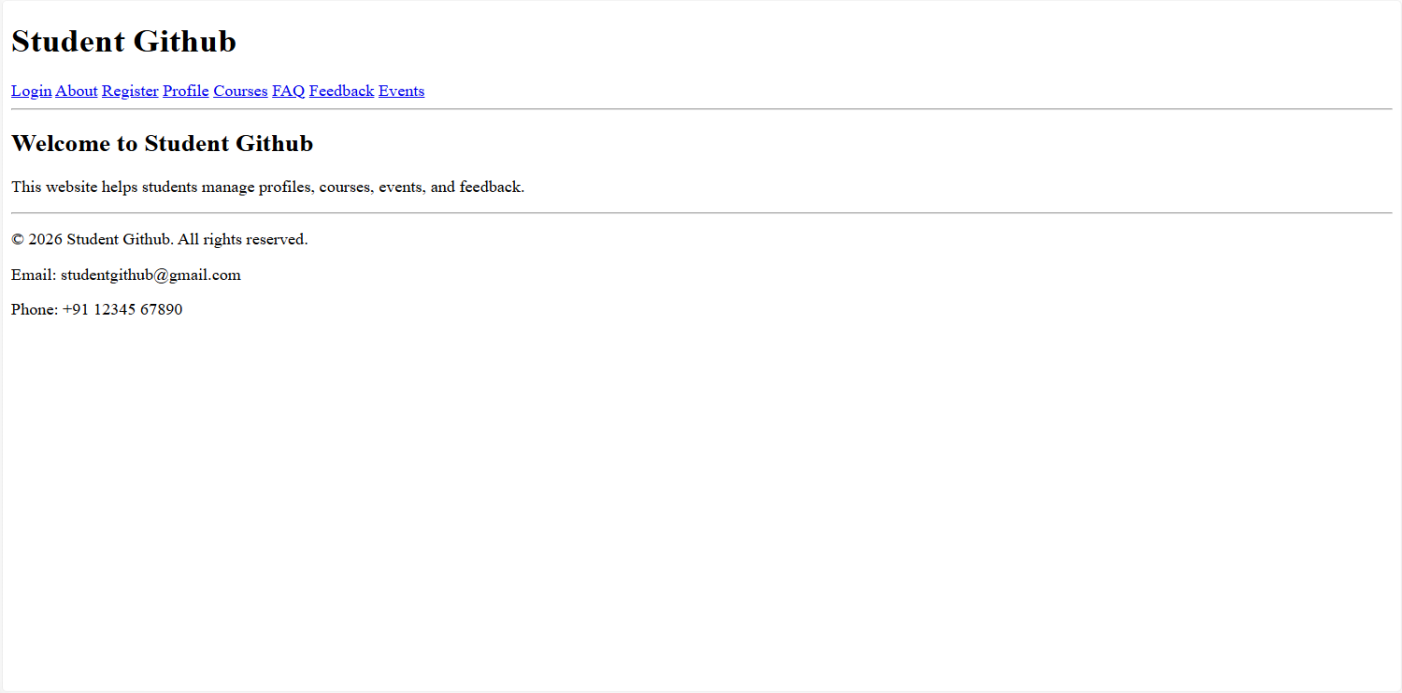

```
<!DOCTYPE html>
<html lang="en">
```

```
<head>
   <meta charset="UTF-8">
   <meta name="viewport" content="width=device-width, initial-scale=1.0">
<title>Student Github</title>
<meta name="description" content="Student Github website for login, registration, courses, events, and feedback.">
   <meta name="keywords" content="student, github, login, register, profile, courses, FAQ, feedback, events">
   <meta name="author" content="Student">
</head>
<body>
 <header>
      <h1>Student Github</h1>
 <nav>
         <a href="login.html">Login</a>
         <a href="about.html">About</a>
         <a href="register.html">Register</a>
         <a href="profile.html">Profile</a>
```

```
        <a href="courses.html">Courses</a>
        <a href="faq.html">FAQ</a>
        <a href="feedback.html">Feedback</a>
        <a href="event.html">Events</a>
      </nav>
 <hr>
  </header>
<main>
      <h2>Welcome to Student Github</h2>
  <p>
        This website helps students manage profiles, courses,
        events, and feedback.
      </p>
  </main>
<footer>
      <hr>
 <p>&copy; 2026 Student Github. All rights reserved.</p>
      <p>Email: studentgithub@gmail.com</p>
```

```
    <p>Phone: +91 12345 67890</p>
  </footer>
</body>
</html>
```

Output: Screenshot only :-

Question-Answer: As per given in Practical list. Write answer of each questions.

1. What is URL and parts of URL?

A URL (Uniform Resource Locator) is the address used to access a resource on the internet, such as a webpage. The main parts of a URL are Protocol, Domain Name, Port, Path, Query String, and

Fragment.

Example: https://www.example.com/courses?id=10#top

2. How does HTML file processed in web browser?

When a user opens an HTML file, the browser reads and parses the HTML code. It creates a DOM (Document Object Model) from the HTML elements and processes CSS and Java Script if included. Finally, the browser renders the processed content as a webpage on the screen.

3. How will page navigation flow managed among all HTML pages?

Page navigation is managed using HTML hyperlinks (<a> tags) connected to different HTML files. For example, the Student Hub Home page can link to login.html, about.html, courses.html, events.html, etc. A common navigation menu can be added to all pages so users can easily move between them.

4. How will GitHub commits be maintained after each practical?

After completing each practical, the updated files are added to Git using git add. A meaningful commit message is then created using git commit, and the changes are uploaded to GitHub using getups. Example: git commit -m "Completed Student Hub sitemap and wireframe”

This maintains a proper version history of the project after every practical.

Conclusion: Write your learning outcome : - The Student Hub portal structure was successfully planned by identifying its scope, user roles, modules, and navigation flow. The sitemap and low-fidelity wireframe provided a clear visual representation of the portal. The project folder structure, README file, and GitHub repository were also prepared for organized development and version control.
