AIM: Develop static HTML5 skeletons for at least 10 StudentHub pages such as Home, About, Register, Login, Dashboard, Events, Profile, Contact, Admin, FAQ, and Feedback. Use semantic tags and accessibility-friendly structure.

Tools/Technology to be Used: VS Code, HTML5, browser accessibility inspection tools

Theory Logic: HTML5 semantic elements, accessibility basics, page linking, navigation menu, content hierarchy

Code & Output:

Question-Answer:

1. Are semantic tags such as header, nav, main, section, article, aside, and footer used properly?
Yes, semantic tags such as <header>, <nav>, <main>, <section>, <article>, <aside>, and <footer> should be used appropriately to clearly define different parts of the webpage.

2. Are form labels, headings, image alt text, and navigation links accessible?
Yes, form fields should have proper <label> elements, headings should follow a logical hierarchy (<h1>, <h2>, etc.), images should have meaningful alt text, and navigation links should have clear and descriptive names.

3. Is the page structure consistent across all pages?
Yes, all pages should maintain a consistent structure, including the same header, navigation menu, main content area, and footer. This makes the website easier to navigate and understand.

Conclusion:

This practical helped in creating semantic HTML5 pages with a clear and consistent structure using accessibility-friendly elements.
It also improved understanding of page navigation, semantic tags, and accessibility practices for a user-friendly StudentHub website.
